

Creator selection is still a guessing game for revenue teams

A FERMÀT-native approach to predicting creator ROI and personalizing the post-click shopping journey

Creator marketing is becoming a performance channel, but brands still still allocate spend using weak proxies. The next frontier is deciding who to who to fund, for what objective, and where to send their traffic.

Brands invest creator budget using signals that do not predict revenue.

Brands are making performance decisions using awareness metrics.

This is a budget allocation + conversion infrastructure problem

Why Now?

Creator → Performance Channel

Teams are shifting from "brand awareness" budgets to strict performance goals.

Pressure on Revenue Metrics

CFOs demand clearer ROI. "Engagement" is no longer a sufficient KPI.

The Missing Link

Urgent need to connect traffic → experience → outcome.

Why FERMÀT?

Personalization Engine

Existing tech stack built to dynamically modify post-click experiences.

Influencer Channel Support

Native workflows for managing and scaling creator partnerships.

Conversion Optimization

Proven strength in turning high-intent traffic into revenue.

Core Insight

If paid ads get intent-based landing pages, **creator traffic should too.**

Paid Ads

Creator Traffic

Current tools help find, manage, or measure — not decide.

Top of Funnel

Native Tools

Instagram, TikTok Creator Marketplaces

- 🔍 Discovery & Search
- 👁️ Reach estimates
- 👍 Engagement metrics

Limitation

Volume focus, no conversion data

Mid Funnel

Influencer Platforms

Grin, Tagger, Aspire

- 📋 Campaign Management
- 💰 Contracting & Payments
- 📊 Basic Analytics

Limitation

Workflow heavy, backward-looking

Bottom Funnel

Attribution Tools

Northbeam, Triple Whale

- 📈 Post-hoc measurement
- 💡 ROAS calculation
- 📺 Channel mix modeling

Limitation

Reports history, doesn't guide future

The Missing Layer: Predictive Allocation

Moving from discovery to **prediction + budget allocation**

Before

"Who fits our brand?"

With FERMÀT

"Who drives profit?"

The problem spans multiple stakeholders

Siloed teams create a disjointed loop from selection to revenue.

"To validate this, we need to understand how these teams actually operate."

How I would validate this problem

Structuring customer conversations to confirm the gap between spend and outcome.

 Problem Sizing Budget & Stakes	🔹What % of your marketing budget is allocated to creators vs. paid social?" 🔹Do you view creator marketing as brand awareness or a performance channel?"
 Decision Logic Selection Criteria	🔹How do you decide which creators get renewed or scaled up?" 🔹What signals do you trust most? (Engagement, Impressions, historical CVR?)"
 Post-Click Exp. Routing & Journey	🔹Where does the traffic land? (PDP, Home, Custom Landing Page?)" 🔹How difficult is it for your team to spin up a unique page for a specific creator?"
 Measurement Attribution Trust	🔹How confident are you in your current attribution for creator revenue?" 🔹What is the feedback loop time between a campaign launch and ROI analysis?"
 Ops & Ownership Workflow Blockers	🔹Who owns the 'creator revenue' number? Growth or Brand?" 🔹What is the biggest blocker to doubling your creator spend today?"

"Across these conversations, a pattern emerges."

The failure is not discovery — it's missing infrastructure.

Diagnosis

No system links the full value chain

Creator → Intent × → Experience × → Outcome

FERMÀT Creator Commerce Intelligence

A closed-loop system to predict ROI and personalize experiences.

Built on top of FERMÀT's existing commerce experience layer

"This becomes powerful when embedded into the actual workflow."

End-to-end workflow

From setting the goal to automated optimization.

"To make this real, we need to prove value in a controlled way."

Proving value with an enterprise pilot

A structured A/B test to validate incremental revenue lift in a controlled environment.

Scope:

 20-30 Creators

 1 Product Category

 4 Weeks Duration

Group A: Control

50% Traffic

Generic Journey

Standard PDP

- Generic landing page
- Broken context from ad
- Baseline conversion

VS

Group B: Test

FERMÀT
INTELLIGENCE

50% Traffic

Tailored Experience

Creator Storefront

- ✓ Personalized landing page
- ✓ Matches creator's hook/ad
- ✓ Dynamic offers & bundles

Conversion Rate

Target Lift: +15-20%

Revenue / Session

Target Lift: +25%

Avg Order Value

Target Lift: +10%

"To scale this, success must be measured in business terms."

Measure success through business outcomes

Moving beyond vanity metrics to revenue impact and strategic scalability.
